Re: Harry Adelson, ND

To whom it may concern:

This letter is written to confirm my knowledge and experiences with Dr. Harry Adelson. I have known Dr. Adelson for more than 2 years, and have had the opportunity to directly work with him as a trainee, co-faculty member, and as a direct observer of his knowledge base and clinical skills relative classic Prolotherapy, PRP Prolotherapy, Biocellular Prolotherapy (utilizing adipose-derived stromal cells + with PRP (or Bone Marrow) concentrates. Dr. Adelson has established a quality protocol for safe harvest of bone marrow aspirates, and has extensive experience within the field of orthopedic regenerative medical applications. He has willingly and effectively shared his experiences and knowledge base to others within the American Association of Orthopaedic Medicine, direct teaching conferences, and other venues.

In my experiences with Dr. Adelson, I have found that he is a diligent and competent practitioner. His awareness of sterile protocol and patient care issues is considered excellent. He has high quality communication skills with both practitioners and patients alike, meeting a high standard of care.

It is my opinion that Dr. Adelson is a knowledgeable and competent naturopathic physician and provides quality of care within his applications to the patients of Utah.

Sincerely yours,

Robert W. Alexander, M.D., F.I.C.S.
